

Global Crossing's VoIP solutions support Colorado's Alpine Access

WDD Asia

Global Crossing has announced that Alpine Access Inc. using the home-based employee model, is using Global Crossing's converged IP services to ease their network expansion, penetrate new markets and deliver superior customer service.

Global Crossing offers a complete portfolio of VoIP services, including Global Crossing VoIP Outbound, VoIP On-Net Plus, VoIP Toll-Free and VoIP Local Service. This portfolio helps customers implement IP convergence, maximize telephony cost savings and reduce total cost of ownership. Global Crossing promotes the development of VoIP peering solutions and includes VoIP Community Peering as a feature in its outbound VoIP calling plans. Global Crossing was the first service provider to replace legacy switches with VoIP switches in its network core to enhance the seamless delivery of IP services. By the end of the second quarter of 2006, IP interconnected VoIP traffic increased to nearly 300 million minutes per month, indicating the increase in IP originated and terminated traffic traversing Global Crossing's VoIP backbone. Global Crossing's VoIP platform currently carries an average of more than 2.5 billion minutes per month.
